

Key topics - Circularity of plastics

Increase in reuse, remanufacture, refurbishment and recycling

- Circularity criteria and labeling
- Investment in innovation and infrastructure
- Extended producer responsibility

Safe circularity

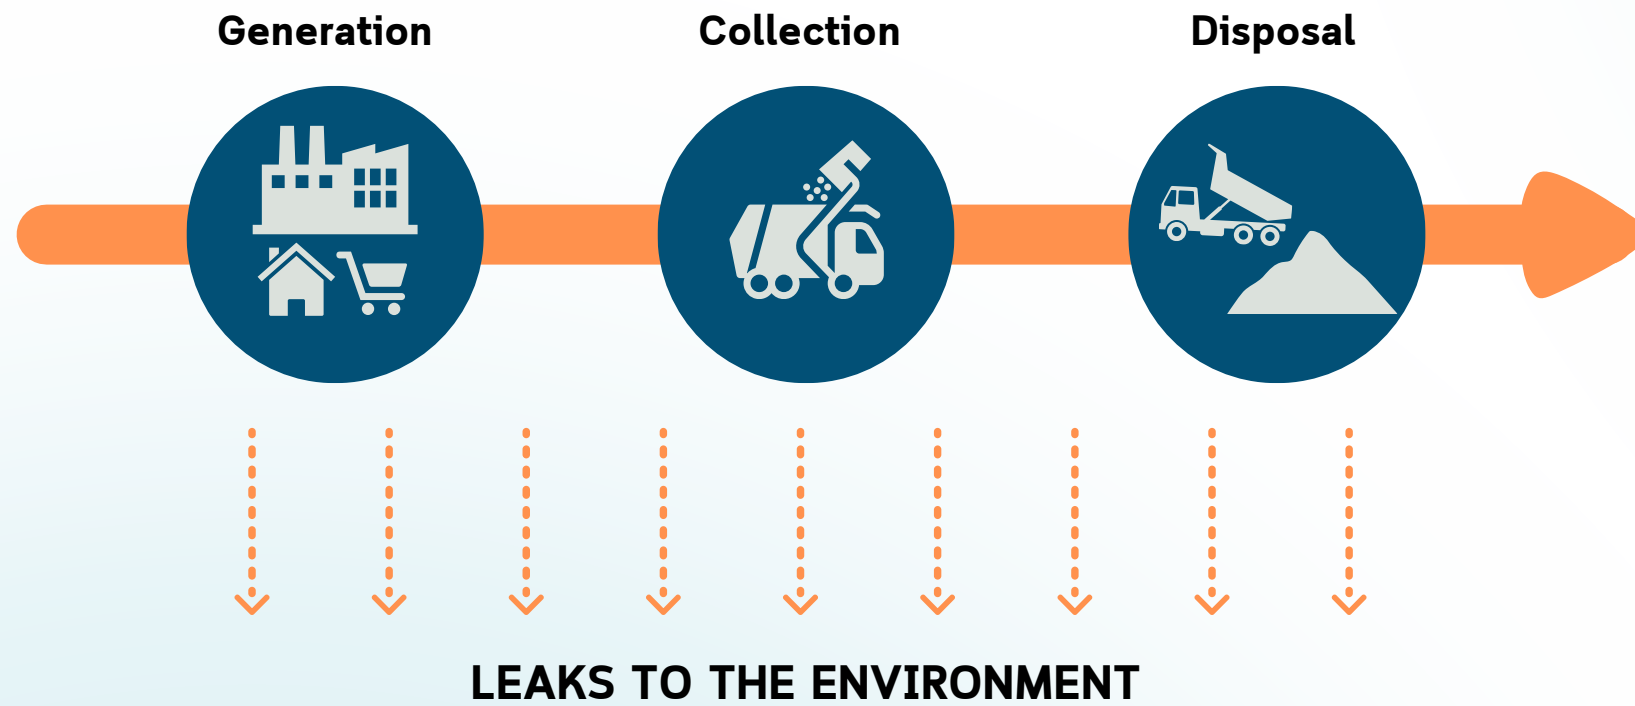

- Control of chemicals of concern
- Traceability and transparency

Reduction in plastic production

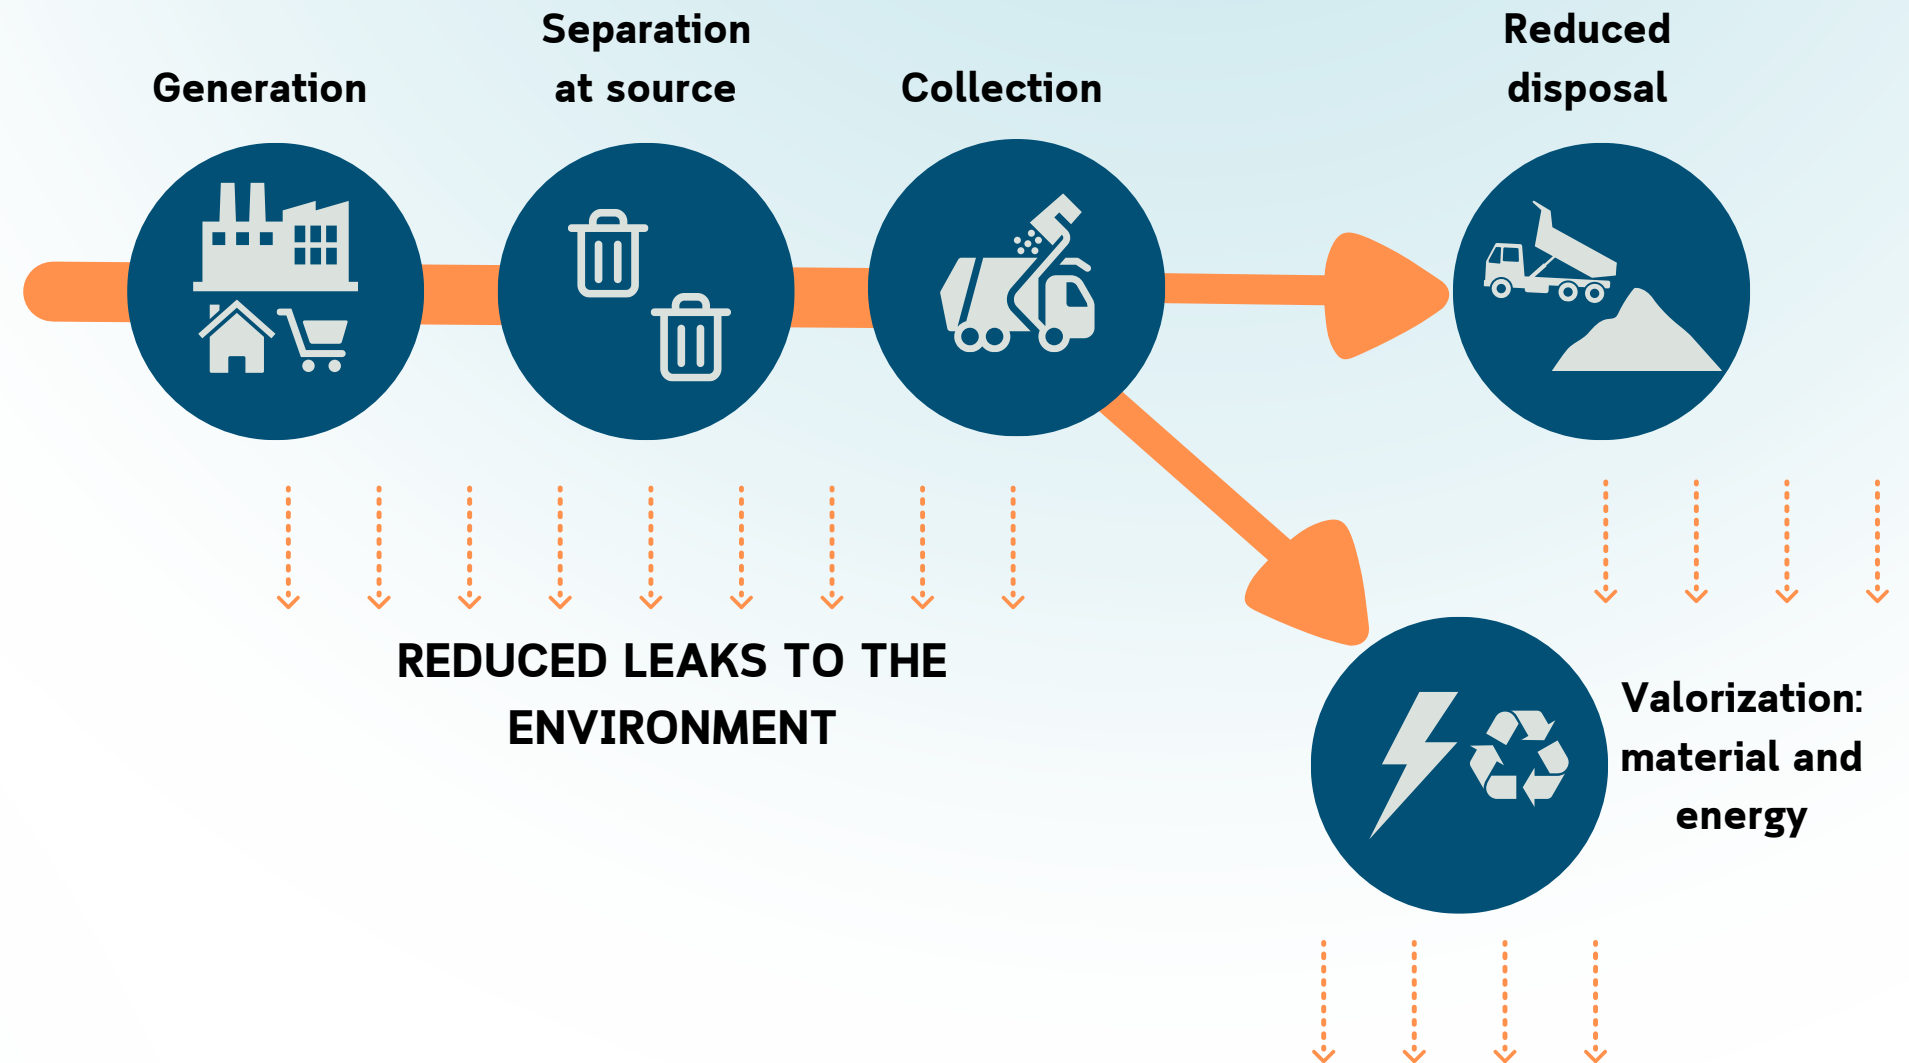

- Global and national targets
- Bans of unnecessary and problematic plastic products

Key topics - Waste management

BASIC

ADVANCED

- Enhanced waste management capacity
- Guaranteed collection and sound management of waste to prevent plastic leakage to the environment
- Increase in circularity through infrastructure and EPR
- Targets for reduction of plastic waste

Key topics - Legacy plastic waste

Remediation

- Development of cost-effective and efficient clean-up and barrier technologies
- Risk analysis to allocate resources
- Innovation in recycling technologies for recovered plastics
- Financing and collaboration
- Agreements about areas beyond national jurisdiction
